

## Regular and Military Times

Regular and military times use the same number of minutes per hour and they use minutes in exactly the same way. Military minutes do not exist and there is no need to convert minutes when going back and forth between the two time systems.

People occasionally encounter time written in a format that appears to use minutes larger than 59 (for example 7:82 or 7.82). Time written in this manner is being expressed in decimal hours (hours and hundredths of hours), not military time. Converting from decimal hours to hours and minutes is a different issue than converting between regular and military time.
